Exporting/Importing Settings
From One Logger To Another

Unzip the RevImportExport Zip file to the Revcord Logger Desktop to be duplicated.
There are two applications:

1. RevExport - Used to export the settings from the older recorder
2. RevImport - Used to import the exported (older recorder) settings to the new recorder

RevExport
1. Run the "RevExport" application as Admin.
   a. This creates a folder called "Backup". It will backup the Registry and Database(SQL).
   b. It will take approximately 5 to 10 minutes.
   c. Once the backup is done the application will automatically close.

RevImport
1. First compress Backup folder to a zip file,
   a. (Be sure to copy the whole folder to the zip file)
2. Then complete a File transfer of the Zip File to the final destination on the new system
3. Run the "RevImport" application as Admin.
   a. It will import the Registry and will replace the Database(SQL) and ShConfig (Synway) Configuration file.
   b. Once Import is done the application will automatically close.
   c. Other data C:\\Disstech will **NOT** be imported. That is for backup purposes only.
   d. If wanted those files are available manually.
