Revcord – NTP Configuration

Summary

NTP synchronizes the clocks of computer systems. It can read the time from a reference source, then transmit the reading to one or more clients and adjust each client clock as required. NTP servers listen for client NTP packets on port 123.

Requirements

NTP Server IP

UDP Port 123 needs to be allowed.

Steps to Configure

Step 1: Please make sure Windows Time service is configured to be started Automatic started and running.

Step 2: Start an elevated command prompt.

Step 3: Execute the following two commands.

```
net time net time \\timesrv /set /yes
```

```
w32tm /config /update /manualpeerlist:<NTP Server IP>
```

Step 4: Verify the IP should be available in **Date and Time settings**.
