

RADIO INTEGRATION

Logger logs EXACTLY what radio users hear.
Guaranteed to log all calls for monitored talkgroups.

By using a combination of education, awareness, and interoperability training we operate to make sure that business buyers of Revcord's digital radio technology have the security of knowing that they are investing in the future.

For all recorded audio calls, Revcord captures and displays all digital radio provided metadata. Specifically, if provided a radio ID or telephone number for a specific audio call, Revcord will capture, label and display that data. In general, if specific metadata is displayed on the digital radio console, it will also appear in the Revcord system.

Revcord operates using TCP and UDP network packets directly addressed to the recorder. Usage of a network port-span (port-mirror) is NOT required.
