

Revcord MMS Universal CAD ANI/ALI Configuration Capabilities

In today's market, many companies claim to offer integrations with their software, but these are often not actual integrations. At Rvcord, we provide clear and effective solutions for working with Computer Aided Dispatch (CAD) and ANI/ALI data, ensuring you receive genuine integration capabilities that you can rely on.

There are two distinct ways to work with CAD and ANI/ALI data through our platform:

Global Configuration Manager for Receiving Data:

Our robust configuration manager is designed to integrate with virtually any CAD program. Whether your CAD system follows the NENA i3 standard for Next Generation 9-1-1 or utilizes other standards, our platform can capture and log ANI/ALI COM-based telephony data and CAD spill information. This ensures comprehensive call recording and incident tracking, delivering a reliable communication solution for PSAP operations. We are capable of configuring systems as long as the data is not in a non-standard proprietary or encrypted format, providing the flexibility needed to meet diverse requirements.

API for Sending Data:

For those who need to send data, Rvcord offers a fully developed set of APIs. These APIs facilitate integration within CAD platforms by enabling call records and playback link requests. This interface empowers partners to access analog, digital, VoIP, and radio call recordings, providing instant recall of call details and extensive search capabilities.

Key Features

Real-Time Incident and Call Logging:

Capture critical information as it happens, enhancing response times and decision-making. Our system ensures you are informed when it matters most.

Scalable and Robust Architecture:

Designed to handle high volumes of telephony recordings and CAD spill data, our solution scales with your needs, providing robust performance for any size operation.

Compliance-Ready Logging:

Meet industry regulations and standards with secure storage and easy retrieval of recorded data.

By clearly distinguishing between receiving and sending data, Rvcord ensures you have the right tools for true integration. Unlike many competitors in the market, our solutions are designed to meet your specific needs, providing both flexibility and reliability. We emphasize our ability to configure systems, provided the data is not locked in a non-standard proprietary or encrypted format, ensuring you can leverage our platform's full potential.
